ZIPRO

Information on Data Generated by the Device (in accordance with the Data Act)
Product Category: Stair climber (training stairs)
Product Name: Legday

Data Generated by the Device
Data are generated to enable the user to monitor training parameters.

Parameter	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
Time Distance Calories Strikes Time/500m Strikes /min	The device collects data in real time during training.	The data is displayed on the LCD screen. The device does not store workout history and does not send data to any application.	Locally on the device — until a new training session starts or the device is powered off.	Data displayed as numerical values on the LCD screen. No export files are generated.	Not applicable (no persistent data storage).	Via computer, only until a new training session begins or the device is turned off.	Not applicable — the device does not share data with third parties and has no connection to any applications.	No	-
Pulse	The device collects data from touch sensors.	The data is displayed on the LCD screen. The device does not store workout history and does not send data to any application.	Locally on the device — until a new training session starts or the device is powered off.	Data displayed as numerical values on the LCD screen. No export files are generated.	Not applicable (no persistent data storage).	Via computer, only until a new training session begins or the device is turned off.	Not applicable — the device does not share data with third parties and has no connection to any applications.	No	-
User program	The device calculates data based on the user's pulse measured in real time.	The data is displayed on the LCD screen. The device does not store workout history and does not send data to any application.	Stored locally on the device – until reset or deletion.	Data displayed as numerical values on the LCD screen. No export files are generated.	40 bytes (no persistent data storage).	Via the console, only until a new training session starts or the device is powered off.	Not applicable — the device does not share data with third parties and has no connection to any applications.	No	On the computer at any time – computer memory is reset after power disconnection.

* Data are locally, anonymously, and are not assigned to a specific user.
